Imagine walking into your backyard at night and suddenly seeing a small, furry creature with distinct black and white stripes. You've just met a striped skunk! These animals are quite small, about the same size as a house cat, and they have a fluffy tail, short legs, and a small head. The two bold stripes running down their back, which merge into a single stripe on their tail, make them easy to identify.

Now that you know what a striped skunk looks like, let's figure out where they live. Striped skunks can be found throughout North America, from Canada all the way down to Mexico. They make their homes in a variety of habitats, including forests, grasslands, and even in urban areas. These creatures are nocturnal, which means they're most active at night, and they like to sleep in burrows during the day.

Having learnt where striped skunks hang out, let's delve into their eating habits. They are omnivores, which means they eat both plants and

small animals. Their diet includes insects, small rodents, berries, nuts, and even garbage when they live near people. To find their food, skunks have sharp claws to dig in the soil and a keen sense of smell and hearing.

So, we know what they look like, where they live, and what they eat, but how do striped skunks interact with other animals and humans? Well, skunks generally avoid other animals, but they can defend themselves with a unique and smelly spray if they feel threatened. This spray is so strong that it can deter predators like bears and wolves! As for humans, skunks are usually harmless unless they feel scared or cornered, so it's best to admire these interesting creatures from a distance.

<b>10)</b> Where can you find striped skunks? (paragraph 2)	10)								
A. B. Only in Mexico			•	viao					
C. D. From Canada to Mexico		U.	D. From Canada to Mex						

## Determine if the statements is something the animal would say (W) or it it is not something the animal would say (N).

11) "We skunks usually avoid humans but if we feel scared or cornered, we might spray. So, it's best to admire us from a distance." (paragraph 4)

#### Striped Skunk

12) "We are active mostly at night and like to sleep in burrows during the day. That's because we are nocturnal creatures." (paragraph 2)
