

Solve each problem.

Answers

- 1) A chef needs six potatoes for a meal. He has already cooked four. If each potato takes nine minutes to cook, how long will it take him to cook the rest?
- 2) Tom had four action figures, but needed seven total for a complete collection. If each one costs \$4, how much money would he need to finish his collection?
- 3) At a restaurant each adult meal costs \$9 and kids eat free. If a group of fourteen people came in and five were kids, how much would it cost for the group to eat?
- 4) Edward earned two dollars for each lawn he mowed. If he had fourteen lawns to mow, but forgot to mow six of them, how much money did he actually earn?
- 5) A new building needed ten windows. The builder had already installed eight of them. If it takes five hours to install each window, how long will it take him to install the rest?
- 6) Oliver had nine video games but seven of them weren't working. If he wanted to sell the working games for \$7 each, how much money could he earn?
- 7) At lunch a waiter had six customers and four of them didn't leave a tip. If he got \$8 each from the ones who did tip, how much money did he earn?
- 8) In a video game, each enemy defeated gives you eight points. If a level has eighteen enemies total and you destroy all but nine of them, how many points would you earn?
- 9) Each chocolate bar in a box cost \$8. If a box had nine bars total and Robin sold all but two bars, how much money would she have made?
- 10) A worksheet had nine problems on it. If a teacher had thirteen worksheets to grade and had already graded eight of them, how many more problems does she have to grade?
